Profile

Second-year Artificial Intelligence and Data Science undergraduate with a backend development focus, working primarily with Python, FastAPI, SQL and PostgreSQL. Currently leading backend development on NEXUS, an AI-Powered Campus Intelligence System approved and seed-funded by KPR Institute of Engineering and Technology. Building depth in AI/ML and data science alongside backend engineering, and seeking internship opportunities in backend development, AI/ML, data science and software engineering.

Skill

Languages: Python, SQL, C, Java (in progress)

Backend: Python, FastAPI

Databases: PostgreSQL, Supabase, Neo4j, SQL

Frontend: React, Next.js

AI / ML: Python-based AI/ML development

Tools: Docker, Supabase

Education

KPR Institute of Engineering and Technology
CURRENTLY IN 2ND YEAR
B.E. / B.Tech — Artificial Intelligence and Data Science
Coursework: C Programming (Semester 1), Python (Semester 2), SQL

Focus

Currently Learning: Java

Areas of Interest: Backend Development, AI/ML, Data Science, Software Engineering

Projects

NEXUS — AI-Powered Campus Intelligence System
ONGOING | BACKEND DEVELOPMENT

- Developing an AI-powered campus intelligence system as the primary technical project of the current academic year.
- Own backend development for the system, covering server-side engineering and data layer work.
- Secured official project approval from KPR Institute of Engineering and Technology through institutional review.
- Awarded institutional seed funding to continue development of the system.

Experience

Backend Development Experience

Prior hands-on experience building backend components with Python, applied outside of prescribed coursework.
Worked with SQL and PostgreSQL for schema design, querying and data handling in backend workflows.
Used Supabase and Docker as part of backend development and deployment workflows.

Achivemenet

Institutional approval and seed funding awarded by KPR Institute of Engineering and Technology for NEXUS — AI-Powered Campus Intelligence System.
